No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 540079

GREATIAL INFORMATION:

ONDERSON SEGURCES:

ONDERS
```

```
NAME/KEY: Modified peptide used for enzyme activity assay
OTHER INFORMATION: Peptide is modified with n-terminal
OTHER INFORMATION: Succinyl group and c-terminal p-nitroanilide group
PUBLICATION INFORMATION:
AUTHORS: Del Mar. B. G.
AUTHORS: Largman, C.
AUTHORS: Largman, C.
AUTHORS: Broderick, J. W.
TITLE: A Sensitive New Substrate for Chymotrypsin
VOLUME: 99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 6

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 1, Application US/09935744

Patent No. US20020137118A1

GENERAL INRORMATION:
APPLICANT: Shinde, Ujwal
APPLICANT: Shinde, Ujwal
APPLICANT: Shinde, Ujwal
TITLE OF INVENTION: Bloogically Active Protein Folding Intermediates
FILE REFERENCE: 266/223
CURRENT APPLICATION UNDER: US/09/935,744

CURRENT FILING DATE: 2001-08-24

NUMBER OF SEQ ID NOS: 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      FEATURE:
OTHER INFORMATION: The N-terminal Ala residue is modified with a OTHER INFORMATION: succinyl group; the C-terminal Phe residue is OTHER INFORMATION: modified with a nitroanilide group.
OTHER INFORMATION: Description of Artificial Sequence: Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

LENGTH: 4

JENGTH: 4

JENGTH: A

ORGANISM: Artificial Sequence

FEATURE:

OTHER INFORMATION: The sequence is part of a synthetic peptide that is used as a sub-
OTHER INFORMATION: atrate for determining the activation time of a stable crosslinke
OTHER INFORMATION: d intermediate conformer.

NAME/KEY: MISC_FEATURE

J. OCTHER INFORMATION: Sequence is preceded by N-succinyl and followed by p-nitroanilide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ద
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 11, Application US/09985157

Patent No. US20020146797A1

GENERAL INFORMATION:

APPLICANT: SHOWATION:

TITLE OF INVENTION: Engineered Protein Kinases Which Can Utilize Modified Nucleotide

TITLE OF INVENTION: Triphosphate Substrates

FILE REFERENCE: 51538-5002-03

CURRENT APPLICATION NUMBER: US/09/985,157

CURRENT PILING DATE: 2002-03-13

PRIOR PLING DATE: 1999-11-17

PRIOR APPLICATION NUMBER: PCT/US98/02522
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

Transplantation rejection; hydrolase; graft versus host disease; cell surface adhesion molecule; immune reaction; inflammation; shock; tumour metastasis; autoimmune disease; Krill derived multifunctional enzyme. Gadus sp.

(PHAI-) PHAIRSON MEDICAL INC. 99WO-US30818. 98US-0114147. WO200038708-A1. 24-DEC-1998; 23-DEC-1999; 06-JUL-2000.

Preventing or ameliorating transplantation rejection reactions using hydrolase enzymes

Franklin RL, St Pierre Y; WPI; 2000-452301/39.

```
Ameliorating, preventing or treating immune rejection reactions, such as graft versus host disease, autoimmune disease, asthma, cancer, by extra-corporeally treating donor tissue with hydrolase such as a

The present invention relates to a method for ameliorating transplantation rejection reaction. The method comprises treating extra-corporeally donor tissue or donor source of immune cells with a rejection ameliorating effective amount of a hydrolase enzyme. The method is useful for ameliorating, treating or preventing immune rejection reactions such as graft versus host diseases, organ or tissue risansplantation rejection, autoimmune disease and associated conditions, microbial infection, immune disorder, cystic fibrosis, chronic obstructive pulmonary disease (COPD), atherosclerosis, cancer, asthma, septic shock, toxic shock syndrome, conjunctivitis, reperfusion injury and pain in humans. The present sequence is the Niterminal peptide of atlantic cod I serime multifunctional hydrolase, used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Multifunctional hydrolage; rejection reaction; extra-corporeal; therapy, graft versus host disease; transplantation rejection; autoimmune disease; microbial infection; immune disorder; cytostatic; cytostatic; atherost obstructive pulmonary disease; COPD; atherosclerosis; cancer; asthma; septic shock; toxic shock syndrome; conjunctivitis; reperfusion injury; pain; immunosupressive; antibacterial; vasotropic; atlantic cod.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ameliorating, preventing or treating immune rejection reactions, such as graft versus host disease, autoimmune disease, asthma, cancer, by extra-corporeally treating donor tissue with hydrolase such as a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              N-terminal of atlantic cod II serine multifunctional hydrolase

                                                                                          transplantation rejection reactions for transplantation of immune cells or other tissues. The method comprises treating a source of immune cells or other tissues. The method comprises treating a source of immune cells with a hydrolase or hydrolase mixture and administering the treated immune cells to a recipient animal. The hydrolase especially has a preference for removing destroying, inactivating or disabling at least one of CD4. CD5. CD28 ICAM-1 (CD54). CD182, an integrin, CD14, CD40 and CD80 in contrast to removing, destroying, inactivating or disabling TCR. The methods are useful for preventing graft versus host disabling TCR. The methods are useful for preventing graft versus host concuses which are involved in triggering the immune reactions involved in the diseases. The methods are used for treating or preventing in the diseases. The methods are used for treating or preventing cell-cell or cell-virus adhesion syndrome comprising inflammation, shock, tumour metastases, autoimmune disease, transplantation rejection recations or microbial infections. The present sequence represents the remainal of a hydrolase, which may be used in the method of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes a novel method for treating acne and eczema using a krill-derived multifunctional enzyme (I) which comprises 2 or more of the activities of chymotrypsin, trypain, collagenase, elastase or exopeptidase and is reactive with cell surface receptors such as proteins or glycoproteins. The product of the invention has activity. (I) removes or inactivates cell surface receptors (proteins and glycoproteins and adhesion molecules such as ICAM-1 (i.e. CD34), ICAM-2, VCAM-1, CD4, CD8, CD28, CD29, CD31, CD44, CD49, CD62L CD102 and the asialo GM1 ceramide. This sequence represents the N-terminal fragment of
a rejection ameliorating effective amount of a hydrolase enzyme. The method is useful for ameliorating, treating or preventing immune rejection reactions such as graft versus host diseases, organ or tissue transplantation rejection, autoimmune disease and associated conditions, obstructive pulmonary disease (COPD), atherosclerosis, chronic septic shock, toxic shock syndrome, conjunctivitis, reperfusion injury and pain in humans. The present sequence is the N-terminal peptide of atlantic cod II serine multifunctional hydrolase, used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Multifunctional enzyme; treatment; acne; eczema; chymotrypsin; trypsin; collagenses; elastase; exopeptidase; cell surface receptor; anti-acne; antiseborrheic; dermatological; anti-eczema; adhesion molecule; ICAM-1; CD54; ICAM-2; VCAM-1; CD1, CD8; CD28; CD28; CD31; CD44; CD49; CD62L; CD102; GM1 ceramide; krill; atlantic cod.
                                                                                                                                                                          Note: The sequence is stated as being the same as that shown as SEQ ID NO 19 (see AAE07951) in column 31-32 of the specification, However the sequences differ at several positions.
                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes a novel method for treating acne and eczema using a krill-derived multifunctional enzyme (1) which comprises 2 or more of the activities of chymotrypsin, crypsin, collagense, elastase or exopeptidase and is reactive with cell surface receptors such as proteins or glycoproteins. The product of the invention have antiseborrheic, antivaces cell surface receptors (proteins or inactivates cell surface receptors (proteins and glycoproteins) and adhesion molecules such as ICAM-1 (i.e. CD54), ICAM-2, VCAM-1, CD4, CD8, CD22, CD20, CD31, CD44, CD4, CD6, CD22, CD31, CD44, CD4, CD6, CD62, CD6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ·.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Multifunctional enzyme; treatment; acne; eczema; chymotrypsin; trypsin; collagenses; elastase; exopetidase; cell surface receptor; anti-acne; antiseborrheic; dermatological; anti-eczema; adhesion molecule; ICAM-1; CD54; ICAM-2; VCAM-1; CD4 CD8; CD29b; CD31; CD44; CD54; CD62L; CD102; GM1 ceramide; krill.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Treating acne and eczema using a krill-derived multifunctional enzyme
                                                                                                                                                                                              Gaps
  an atlantic cod (Gadus sp.) hydrolase which is used to describe the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                            0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0

Use of microgel comprising crosslinked polyanionic polymer and optionally proteclytic enzyme in treatment of corneal wounds e.g. ulcers and abrasions and internal trauma e.g. surgical wounds and treating implants to reduce adhesions

Disclosure, Page 25; 85pp; English.

The invention relates to use of a microgel comprising a crosslinked polyamical compositions for treatment of an area affected by a trauma selected from corneal wounds and internal trauma. The compositions further comprise a multifunctional procease having activities selected from two of chymotrypsin activity, trypsin activity, collagenase activity and elsetase activity. In particular, the procease compositions of six isoforms of white shrimp (Penseus vannamei) antifunctional hydrolase (AAB22947-B22952), or a multifunctional enzyme comprising one of the peptide sequences given in AAB2951-B22967.

Compositions of the peptide sequences given in AAB2951-B22967.

Compositions of the invention may be used to treat corneal ulcer. (Including infected ulcers), or abrasions or a chemical or physical insult to the cornea that are likely to give rise to a corneal ulcer. They are also used to treat internal traumas selected from an internal organ or tissue or the cavity in which one or more internal internal organ or tissue or the cavity in which one or more internal organs or tissues reside, with the membrane being selected from the peritoneum, the pericardium, the epicardium and the pleura and a peritoneum, the pericardium, the epicardium and the pleura and a corneal enternal sheath, where the trauma is to a tendon, tendon sheath, a nerve cor a nerve sheath, where the trauma is susceptible to givining rise to a reduce formation or reformation of adhesions, and the composition can be used to treat an implant to reduce formation of adhesions, and the composition of squences AAB22951-B22967 represent peptide sequences from a variety of squences AAB22951-B22967 represent peptide sequences from a variety of these sequences are claimed for use in compositions of the invention.

control in the comparison of the comparison of an area affected by polyamionic polymer in compositions for treatment of an area affected by a trauma selected from corneal wounds and internal trauma. The compositions further comprise a multifunctional procease having activity, trypsin activity, collagenase activity and elastese activity. In particular, the procease collagenase activity and elastese activity. In particular, the procease collagenase activity and elastese activity. In particular, the procease (collagenase activity and elastese activity. In particular, the procease comprising one of the peptide sequences given in AAB22953.B22967.

Compositions of the invention may be used to treat corneal ulcers (including infected ulcers), or abrasions or a chemical or physical (including infected ulcers), or abrasions or a chemical or physical ulcer. They are also used to treat internal traumas selected from an internal organ or tissue or the carity in which one or more internal organ or tissue or the carity in which one or more internal organ or tissues reside, with the membrane being selected from the periconeum, the pericardium, the epicardium and the pleura and a periconeum, the parthal trauma is to a tendon, tendon sheath, a nerve meninges. The internal trauma is to a tendon, tendon sheath, a nerve cor a nerve sheath, where the trauma is susceptible to giving rise to a reduce formation or reformation of adhesions, and the composition of albesions. The amount of microgel administered is sufficient to prevent or sequences AAB225951-B22967 represent poptide sequences from a variety of multifunctional hydrolases. Multifunctional hydrolases comprising one of these sequences are claimed for use in compositions of the invention. The invention relates to use of a microgel comprising a crosslinked

The method provides administration of a composition comprising a polyamionic polymer. The method is useful for treating corneal wounds, including corneal ulcers. Corneal abrasions or injuries which may give treat to corneal ulcers. The method is also useful for treating internal organ, tissue or cavity or trauma likely to give rise to occurs an entrance of the method is useful for treating covers an further method is useful for treating coveries and sorder, endometricosis, pelvic inflammatory disease, adhesive peritonitis, appendicitis, peridentitis, pericarditis and pleuritis or multifunctional hydrolase peptide regresents the atlantic cod I polymers of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method for treating corneal wounds or internal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Trauma. The method provides administration of a composition comprising a polyanionic polymer. The method is useful for treating corneal unders, corneal abrasions or injuries which may give inset to corneal ulcers. The method is also useful for treating internal trauma, including surgical wounds, trauma to a membrane that covers an organ, tissue or cavity or trauma likely to give rise to adhesions. A trauma disorder, endometriosis, pelvic inflammatory disease, adhesive perifontis, appendicitis, peridentics, pericarditis and pleuritis or other inflammatory diseases. This sequence represents the atlantic cod II polymers of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Treatment of corneal wounds, internal trauma or inflammatory diseases comprises administration of a polyanionic polymer

The specification describes a method for preventing or ameliorating cransplantation rejection reactions for transplantation of immune cells crother tissues. The method comprises treating a source of immune cells with a hydrolase or hydrolase mixture and administering the treated immune cells to a recipient animal. The hydrolase especially has a preference for removing, destroying, inactivating the treated of CD4. CD8, CD2, CD2, CD2, CD2, CD2, an integrin. CD154, cone of CD4. CD8, CD25, CD24 in CD152, an integrin. CD154, CD40 and CD80 in contrast to removing, destroying, inactivating or disabling rCR. The methods are useful for preventing graft versus host molecules which are involved in triggering the immune reactions involved in the disease by using hydrolase enzymes to remove the cell surface adhesion collection cells. The methods are used for treating or preventing or cell-cell or cell-virus adhesion syndrome comprising inflammation, shock, tumour metasteses, autoimmune disease, transplantation rejection reservance or microbial infections. The present sequence represents the remaind of a trypsin hydrolase, which may be used in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Tranquiliser; vulnerary; cytostatic; gynaecological; antiinflammatory;

The method provides administration of a composition comprising a polyanionic polymer. The method is useful for treating corneal wounds, including corneal ulcers, corneal abrasions or injuries which may give rise to corneal ulcers. The method is also useful for treating internal trauma, including surgical wounds, trauma to a membrane that covers an trauma, including surgical wounds, trauma to give rise to adhesions. A further method is useful for treating cervical spondylosis, cumulative trauma disorder, endometriosis, pelvic inflammatory disease, adhesive peritonitis, appendictis, peridentitis, peridentitis, peridentitis, peridentitis or other inflammatory diseases. This sequence represents an N-terminal peptide region of an alantic cod multifunctional hydrolase relating to the polyanionic polymers of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      arthritis, inflamed joint, bursitis, osteoarthritis, septic arthritis, rheumation, dringmed joint, bursitis, osteoarthritis, septic arthritis; rheumatoid arthritis; fibromyalgia; systemic lupus erythematosus; pilebitis; tendinitis; rash; psoriasis; acne, eczema; facial seborrheic eczema; foreskin infection, athlete's foot; fistulae infection, ulcer; navel infection; wrinkle; scar, kelloid; boil; wart; allergic itch; hemorrhoid; wound; fungal infection; autoimmune disease.

Fish serine proteinase, useful as a cosmetic, medicament for treating eczema, psoriasis, arthritis, and in the manufacture of the medicament for treating, preventing pathogenic diseases involving receptor mediated binding

Disclosure; Page 13; 38pp; English.

The specification describes a fish serine proteinase. The proteinases are useful as medicaments, for treating and preventing a disease in a numan nor an animal such as pain, acute inflammation, chronic remainal such as pain, acute inflammation, chronic rehumatoid arthritis, inflamed joints, burstis, osteoarthritis, fibromyladia, systemic lupus erythematosus, phibitis, tendinitis, rash, psoriasis, acne eczema, facial seborrheic cezema, eczema of the hands, infections, acne eczema, facial seborrheic cezema, eczema of the hands, infections, wounds from burst, infections in newborns, wrinkles, scars, infections, wounds from burst, fungal infections and immunological and skin from otherwise healthy skin, and for treating or preventing a disease. They are also useful for removing dead or peeling disease in which pathogenesis is caused by bacteria, virus, funga, the present sequence represents the amino acid sequence of cod trypsin

225 AA; Sequence

```
The present sequence represents a trypsinogen, which is a protease (I) isolated from Engraulis japonicus (also called Engraulis japonica or Japanese anchowy). The present invention also describes: (I) a DNA encoding (I), or encoding a protease consisting of an amino acid sequence in which part of the amino acid residue is replaced, inserted or deleted in the amino acid sequence encoded by the above DNA and thaving a bio-activity substantially same as (I); (2) an expression vector in which the above DNA is recombined; (3) producing a sardine-containing substantially no other protein derived from fish; and containing substantially no other protein derived from fish; and containing substantially no other protein derived from fish; and containing substantially no other protein derived from fish; and the generation of an unpleasant small compared to a case where the protease prepared by the above method is not added in which at least cone of a fish or a shellfish selected from the group consisting of clupeidae order is immersed in an aqueous solution containing salts in a short naving a short mathod is added to it and fermented for about it to II and the protease prepared to a containing salts in the part of the group consisting as the protein a short protein a short protein containing salts in the preparation of a fish sauce in a short protein containing salts in the preparation of a fish sauce in a short protein containing salts in the preparation of a fish sauce in a short protein containing salts in the preparation of a fish sauce in a short protein and                                                                 0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ·.

                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes a novel method for treating acne and eczema using a krill-derived multfunctional enzyme (1) which comprises 2 or more of the activities of chymotrypsin, trypsin, collagenase, elastase or exopeptidase and is reactive with cell surface receptors such as proteins or glycoproteins. The product of the invention have antiseborrheic, anti-acne, dermachological and anti-eczema activity.
(1) removes or inactivates cell surface receptors (proteins and glycoproteins) and adheaion molecules such as ICAM-1 (i.e. CD54), UCAM-1, CD4, CD8, CD29, CD31, CD44, CD49, CD61, CD102 and the asialo GM, ceramide. This sequence represents the N-terminal fragment of an atlantic cod (Gadus sp.) hydrolase which is used to describe the

The invention relates to use of a microgel comprising a crosslinked polyanionic polymer in compositions for treatment of an area affected by polyanionic polymer in compositions for treatment of an area affected by compositions further comprise a multifunctional protease having conjugations further comprise a multifunctional protease having collagenase activity and elastase activity. In particular, the protease only in a six isoforms of white shrimp (Penaeus vannamei) and internal by a six isoforms of white shrimp (Penaeus vannamei) on pritaing one of the invention may be used to treat corneal ulcers of insult to the cornea that are likely to give rise to a corneal ulcer. Compositions of the invention may be used to treat corneal ulcer. Compositions of the invention may be used to creat corneal ulcer. Insult to the cornea that are likely to give rise to a corneal ulcer. Compositions or tissue or the random selected from an internal surgical wound, or a trauma selected from an internal organ or tissue or the cavity in which one or more internal organ or tissue or the cavity in which one or more internal organ or tissue or the cavity in which one or more internal organ or tissue or the cavity in which one or more internal organ or tissue or the remains the perioardium, the epicardium, the pelangement or meninges. The internal trauma is to a tendon, tendon sheath, an areveen meninges. The internal trauma is to a tendon, tendon sheath, an or reduce formation or reformation of adhesions.

The absolvant of microgel administered is sufficient to giving rise to a reduce formation or reformation of adhesions.

The absolvant of microgel administered is sufficient to giving one of multifunctional hydrolases. Multifunctional hydrolases comprising one of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gapa

The specification describes a fish serine proteinase. The proteinases are useful as medicaments, for treating and preventing a disease in a human or an animal such as pain, acute inflammation, chronic dronic inflammation, arthritis, inflamed joints, bursitis, osteoarthritis, inflamed joints, bursitis, osteoarthritis, inflamed joints, bursitis, septic arthritis, inflamed loints, pursitis, septic arthritis, fibromyalgia, systemic lupus erythematosus, phlebitis, tendinitis, rash, psoriaafs, acne, eczema, facial sebornheic eczema of the hands, face or neck, foreskin infections, athlete's foot, fistulae infections, infections underthe and lergic itch, hemorrhoids, wounds, wound infections, wounds from burns, fungal infections and immunological and autoimmune diseases. They are also useful for removing dead or peeling skin from otherwise healthy skin, and for treating or preventing a classaste in which pathogenesis is caused by batteria, virus, fungus, parasite or a protozoan or a receptor mediated binding is involved.

The present sequence represents the amino acid sequence of cod trypsin
 Fish serine proteinase, useful as a cosmetic, medicament for treating eczema, psoriasis, arthritis, and in the manufacture of the medicament for treating, preventing pathogenic diseases involving receptor mediated binding

The present sequence represents a trypsinogen, which is a protease (I) isolated from Engraulis Japonicus (also called Engraulis japonica or Japanese anchovy). The present invention also describes: (I) a DNA cenceding (I), or encoding a protease consisting of an amino acid encoding (I), or encoding a protease consisting of an amino acid sequence in which part of the amino acid residue is replaced, inserted or deleted in the amino acid sequence encoded by the above DNA and ving a bio-activity substantially same as (I); (2) an expression vector in which he above DNA is recombined; (3) producing a sardine-derived protease in which a host cell transformed by the above containing substantially no other protein derived from fish; and containing substantially no other protein derived from fish; and (5) the preparation of a fish sauce in a short period while inhibiting the generation of a fish sauce in a short period while inhibiting protease prepared by the above method is not added in which at least one of a fish or a shellfish selected from the group consisting salts in a sa high salt concentration as above 8% to 24% and the protease prepared is an an aqueous solution containing salts in a salt and firsh salt concentration as above 8% to 24% and the protease prepared for the preparation of a fish sauce in a fis

The present sequence represents a trypsinogen, which is a procease (I) isolated from Engraulis japonicus (also called Engraulis japonicus (also called Engraulis japonicus or Japanese anchovy). The present invention also describes: (1) a DNA encoding (I), or encoding a procease consisting of an anino acid sequence in which part of the amino acid residue is replaced, inserted or deleted in the amino acid sequence encoded by the above DNA and having a bio-activity substantially same as (1); (2) an expression vector in which the above DNA is recombined; (3) producing a sardine-derived procease in which a host cell transformed by the above expression vector is cultured and (I) is recovered; (4) a protease containing substantially no other protein derived from fish; and (5) the preparation of a fish sauce in a short period while inhibiting the generation of an unpleasant smell compared to a case where the one of a fish or a shellfish selected from the group consisting of the above method is not added in which at least one of a fish or a shellfish selected from the group consisting of a shiph salt concentration as about 8 to 24% and the protease prepared by the above method is added to it and fermented for about 1 to 11 short nerion of a fish the preparation of a fish sauce in a short nerion of a fish sauce in a short nerion of a fish sauce in a short nerion of a fish sauce in a short nerion of a fish sauce in a

 Nucleotide sequence AAC66182 encodes human trypsin hL AAB35701, a serine protease. The invention relates to the human hL gene and protein sequences, to a recombinant vector containing the nucleotide sequence, and a host cell containing the vector. Human trypsin hL can be used for screening for serine protease inhibitors, in the preparation of a lung disease model animal, and for the development of an index marker of lung diseases caused by an anti-trypsin hL antibody.

 An almost complete pig trypsinogen (AAW08475) lacking the very N-terminal end of the signal peptide is the product of a cDNA clone (AAY49818) isolated from a pig pancras cDNA library. The cDNA clone can be fused to a signal sequence (e.g. from the native enzyme or from a specified amylase gene) and used for prodn. of recombinant tryppin in transformed host cells, esp. filamentous fungus, e.g. secreted by Aspergillus niger. Levels of trypsin secreted by Aspergillus spp. are several-fold higher than those obtd. using other microbial systems.

Ä,
The present invention relates to a method for analysis of three dimensional structures. The method involves generating a combination of correspondence satisfying a restriction condition between the elements belonging to a first and second point sets from among all candidates for the combination of correspondence, and calculating a root mean square distance between the elements corresponding in the combination of corresponding in the combination of corresponding in the combination of structures of molecules, particularly proteins. To illustrate the invention, the serine proteases trypain and elastase were used. The present sequence is a partial sequence for trypsin. The histidine and serine active sites of trypsin and elastase were analysed using the method of the invention.

The present invention relates to human tumour antigen-derived gene 15 (TABG-15) protein and coding sequence (see AAH21601 and AAB98500).

TABG-15 is an extracellular serine protease. It was found that TABG-15 is 9-20 residues that lack TABG-15 protein protein or its fragments of vaccinating an individual against TABG-15, having, suspected of having or at risk of getting cancer. Furthermore, the TABG-15 gene can be used as a diagnostic or therapeutic target in cancer. The present sequence was used in a sequence homology alignment with the catalytic domain of TABG-15.
 Novel extracellular serine protease, termed tumor antigen-derived gene
15 protein overexpressed in carcinomas and DNA encoding it, for

 This invention describes a novel purified and isolated analogue of mature macrophage stimulating protein (MSP) having at least one unpaired cysteine residue substituted with another amino acid which modulates the proliferation or differentiation of the intestinal epithelium. The product of the invention binds to RON (a cell membrane protein tyrosine conditions which is a member of the cheek family) to promote the formation of kinase which is a member of the cheek family) to promote the formation of colon crypts. MSP analogues are useful for the treatment of conditions include thematopotetic disorders such as those involving a deficiency of megakaryocytes and gastrointestinal disorders such as ulcerative colitis, crohn's disease and infections. The MSP analogues are useful for maintaining and repairing the epithelial lining in the treatment of ancer, where the aggressive use of chemotherapeutic agents or the use of chack model body radiation may lead to gut toxicity. The MSP analogues, which cancer, which may lead to gut toxicity. The MSP analogues, which chave a higher activity than normal human MSP are effective at smaller charge and might are any be administered less frequently than human MSP. This sequence represents a human trypsin serine protease to domain which is used in a description of the method of the invention.

 symogenic precursors of a protesse (in this invention trypsinogen), have their natural cleavable site replaced by a non-natural, autocatellytically cleavable site. Such protesses are reagents for producing peptide hormones and other therapeutic proteins by cleavage of their fusion proteins, and some also have therapeutic activity themselves, e.g. thrombin for treatment of coagulation disorders. The protesses are produced simply and in high yield without the need to add another protesse for cleavage, reducing costs and avoiding contamination of the final enzyme.

The present sequence is human trypsinogen, a member of the serine protease family. Kalikreins and kallikrein-like proteins are a subgroup of the serine protease enzyme family. They catalyse the selective cleavage of specific polypeptide precursors to release beptides with potent biological activity. Nucleic acids encoding kallikrein-like proteins KLK-L1, KLK-L2, KLK-L3, KLK-L4, KLK-L5 and KLK-L6 have been isolated. The proteins are useful in the treatment, monitoring and diagnosis of canners, especially prostrate cancer. They can also be used to identify a substance that can associate with or mediate the biological activity of the proteins. Antibodies can be used to treat conditions mediated by the kallikrein-like proteins.
 New kallikrein-like (KLK-L) proteins for diagnosing and treating KLK-L protein mediated disorders, especially cancer.

 This sequence is used in the creation of a database containing the information for amino acid sequence of protein with at least 1 bloological function with added a score on importance of expression of the biological information for each amino acid residue. The database is polypeptide based on the homology of amino acid sequence, e.g. sterio publication of protein, and includes retrieval and evaluation of high homologous relationship for the determination of mostly resembling protein. The database allows for correct and rapid retrieval and protein and protein and polypeptide having biological functions.
